

SUSTAINABILITY STRATEGY

Sustainability Strategy

Wolftank has since its inception an unwavering respect for the environment, and this responsibility is anchored in our core values and our core business. We are fully committed to the ESG Principles and UN Sustainable Development Goals.

Our sustainability strategy defines three main areas to mitigate effects of the climate change and to address the energy transition. These three aspects are based on the results of our ongoing stakeholder dialogue and our analysis as part of the Wolftank Materiality Matrix, as well as on the UN Sustainable Development Goals.

Emissions reduction in mobility and industrial activity

As environmental technologists, we are enabling safe energy for the future. We innovate and promote post-fossil energy models with minimised emission and carbon footprint.

Environmental protection and restoration

We prevent contamination in soil and water as well as we heal these vital sources when they have been damaged. In addition, we promote recycling and reusing as key elements of our business.

People in the centre

We believe in the talent, expertise and passion that compose our Group and we work to develop healthy, safe and inclusive environments for our employees.
